Interior building for engineers is ACC's Crowning achievement

ACC Construction has completed a 6,000 s/f interior build-out on the 22nd floor of the Crown Building, 730 Fifth Avenue, for Spitzer Engineering, announces Michele Medaglia, president and CEO of New York's leading general contracting and construction management firm.

The project, which was completed within four months, entailed the demolition of the existing space and interior fit-outs comprising of elabo-

rate finishes such as marble flooring, and high-end millwork. Additional work included the installation of new ceilings, electrical and lighting systems.

"The build-out was first rate as was befitting of such an auspicious organization," said Medaglia.

"Moreover, the Crown Building's management team at Winter & Co. helped to expedite the process and the project was completed on time."
